DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kanamura (2004/0185364) in view of Sato (6,852,461) and Takezawa (6,528,211).

Kanamura teaches a toner where the glass transition and softening temperatures of the polyester binder and the melting point of the wax have a relationship within the claimed ranges to improve fixing, resistance, and durability (claims). Kanamura suggests the use of multiple polyesters and waxes (paragraphs 27-39). Sato additionally suggests relationships between multiple polyesters and multiple waxes and related properties to improve fixing, offset, and smearing (claims). Kanamura and Sato do not teach infrared absorbing agents included in the toner. Takezawa teaches a similar polyester and wax containing toner where physical properties are in the claimed range (col. 6 lines 20-31). Takezawa specifically teaches the inclusion of an infrared absorbing agent to facilitate non-contact or flash fusing. It would have been obvious to one of ordinary skill in the art to include the infrared absorbing agent of Takezawa and the multiple binders and waxes of Sato as part of the toner composition of Kanamura because of the similarities in the individual components of the toner compositions that are each used for the same

intended purpose with the expectation of similar results such as improved fixing, resistance, durability, offset, and smearing.
